Bird Records Committee, Taiwan Wild Bird Federation
Fl. 2, No.3, Ln. 50, Tacheng St., Datong Dist., Taipei City 103, Taiwan
E-mail: mail@bird.org.tw

This checklist of the birds of Taiwan was prepared by the Bird Records Committee, an official committee of the Taiwan Wild Bird Federation. The committee updates the checklist every three years, with the newest version being released on May 28, 2026. It is the most complete and accurate checklist for the birds found in Taiwan (officially the Republic of China). The geographical area covered in this checklist includes all land areas under Taiwan's jurisdiction. This includes Taiwan proper and its adjacent islands of Xiaoliuqiu, Lanyu, and Green Island, the Penghu Archipelago, the Dongsha Islands in the South China Sea, and the two island groups bordering mainland China, the Matsu Archipelago and the Kinmen Islands. Using geographical locations and avifaunal similarity as its basis, the committee divided the checklist into four distinct geographical regions: Taiwan (including adjacent islands and Penghu), Matsu, Kinmen, and Dongsha. The taxonomy and English names for birds in this checklist follow the eBird/Clements Checklist of Birds of the World Version 2025 (Clements *et al.* 2025), which was released online in October 2025. In total, this checklist accepts 703 bird species.

This checklist categorizes the bird species of Taiwan into six statuses: **R**esident (remains year-round in a specific region), **W**inter Visitor (spends only the winter in a specific region), **S**ummer Visitor (spends only the summer in a specific region), **T**ransient Migrant (only stops for a short period of time during their annual migration), **P**elagic Seabird (mostly stays on open sea and rarely visits land), **V**agrant (recorded well outside of its normal range), and **I**ntroduced (introduced by humans deliberately or accidentally). A given species may have multiple statuses within a specific region. The committee also used its most up-to-date information on the distribution and abundance of birds in Taiwan to assign the species normally distributed in Taiwan into three categories: **C**ommon (having an >70% chance to record the species during

a day-trip in the appropriate habitat and at the appropriate time), **Uncommon** (having a 30%-70% chance to record the species during a day-trip in the appropriate habitat and at the appropriate time), and **Occasional** (having a <30% chance to record the species during a day-trip in the appropriate habitat and at the appropriate time). For certain species whose distribution is restricted to specific islands or regions of Taiwan, the committee assigns the species to one of four categories: **Lanyu**, **Green Island**, **Guishan Island** or **Local** to describe its abundance in those areas.

Comments and suggestions on this checklist are welcome and should be submitted to the Taiwan Wild Bird Federation.
