

The 2012 CWBF Checklist of the Birds of Taiwan

Tzung-Su DING, Ching-Sung JUAN, Ruey-Shing LIN, Chih-Yuan, PAN, Yi-Jung TSAI, John WU, and Yu-Hsiang YANG

Bird Record Committee, Chinese Wild Bird Federation
No.3, Ln. 36, Jinglong St., Wenshan Dist., Taipei City 116, TAIWAN
E-mail: mail@bird.org.tw

This checklist of the birds of Taiwan is prepared by Bird Record Committee, an official committee of Chinese Wild Bird Federation. The committee updates the checklist annually to assure it is the most complete and accurate checklist for the birds found in Taiwan. The current version was released on March 1, 2012. The geographical area of this checklist covers the land and sea under the jurisdiction of the government of the Republic of China (widely known as 'Taiwan'), including Taiwan Island and its adjacent islands (Penghu, Lanyu, and Ludao), and two groups of outlying islands near mainland China: Matsu islands and Kinmen islands. Based on the geographical location and avifauna similarity, we divide the geographical area of this checklist into three regions: Taiwan (including adjacent islands), Matsu, and Kinmen. The taxonomy and English names for birds in this checklist follow the Clements Checklist of Birds of the World Version 6.6 (Clements et al. 2011), which was released online on August 23, 2011. The only exception that does not follow the Clements 6.6 checklist is Taiwan Rosefinch (*Carpodacus formosanus*), which we accept it as an endemic species of Taiwan, as suggested by Wu et al. (2011). In total, the checklist includes 601 bird species (10 naturalized species) and recognizes 24 endemic species and 59 endemic subspecies of Taiwan.

This checklist categorizes the birds of Taiwan into six statuses: **Resident** (remain year-round in a specific region), **Winter Visitor** (spend only the winter in a specific region), **Summer Visitor** (spend only the summer in a specific region), **Transient Migrant** (only stop for a short period of time during their annual migration), **Pelagic Seabird** (mostly stay on open sea and rarely visit land), and **Vagrant** (recorded outside of its normal distribution range). A given species might have multiple statuses within a specific region. With our best knowledge on the distribution and abundance of birds in Taiwan, we assign the species to four categories: **Common** (have a >70% chance to record the species during a day-trip in appropriate habitat and time), **Uncommon** (have a 30%-70% chance to record the species during a day-trip in appropriate habitat and time), **Occasional** (have a <30% chance to record the species during a day-trip in appropriate habitat and time), and **Vagrant** (with very limited records).

Comments and suggestions on this checklist are welcome and should be sent to Chinese Wild Bird Federation.

Literature cited

- Clements, J.F., T.S. Schulenberg, M.J. Iliff, B.L. Sullivan, C.L. Wood, and D. Roberson. 2011. The Clements checklist of birds of the world: Version 6.6. Downloaded from <http://www.birds.cornell.edu/clementschecklist/Clements%206.6.xls>
- Wu, H.-C., R.-C. Lin, H.-Y. Hung, C.-F. Yeh, J.-H. Chu, X.-J. Yang, C.-J. Yao, F.-S. Zou, C.-T. Yao, S.-H. Li, and F.-M. Lei. 2011. Molecular and morphological evidences reveal a cryptic species in the Vinaceous Rosefinch *Carpodacus vinaceus* (Fringillidae; Aves). *Zoologica Scripta* 40:468-478.
